Cyber Security Solutions

MBA Consulting Services (MBA CSI), headquartered in Northern Virginia, is a leading, privately held, small business professional services provider for the public and private sector. Established in 1999, the firm has expanded its services and customer base to become a leading provider and integrator of Workforce Augmentation, Information Technology, Integrated Engineering and Cyber Security solutions to the federal government.

MBA Consulting Services provides a variety of Cyber Security solutions for our private and public sector clients. We provide endpoint, network and infrastructure system security design and implementation guidance as well as security compliance and penetration test support in all aspects of Information Assurance (IA) and Information Security (InfoSec) Engineering solutions.

MBA CSI architects, designs, and implements highly available and fault tolerant Identity Management and Access Control components integrated with external data sources as well as Smart Card authentication subsystems. We have also been instrumental in maintaining security compliance and achieving certification and accreditation efforts.

We have developed a host of innovative and unique techniques and approaches for identifying, recruiting, on-boarding, and retaining highly-qualified, specialized personnel and have amassed a database of over 5000 cyber security professionals within the continental US. Importantly, our unique recruiting and staffing procedures fit well with the highly structured and often time sensitive requirements of Federal contracting.

Moreover, our quick-on-our-feet flexibility and small business status match well with the requirements of federal agencies.
